

DISTANCE LEARNING

Innovation Challenge

Through the Vibe Coding Challenge, students will develop a specific set of modern technical and cognitive skills:

- *Prompt Engineering & AI Steering: Learning to give precise, logical instructions to AI models to generate functional code.*
- *Natural Language Programming: Transitioning from "writing" code to "describing" logic and behavior.*
- *Code Auditing & Debugging: Critically reviewing AI-generated outputs to identify logic gaps, security flaws, or "hallucinations."*
- *Computational Thinking.*
- *Systems Thinking: Understanding how different software components (frontend, backend, and AI APIs) interact.*

DISTANCE LEARNING

Vibe Coding Challenge.

Build a Study Planner designed for students learning online. Your solution must genuinely help a learner organise their time, track tasks, or stay motivated. It can be a website, a web app, or a mobile-responsive app.

Suggested features to consider (you do not need all of these):

- A weekly or daily schedule view with subject blocks***
- A task list with priority levels and due dates***
- A Pomodoro timer or focus session tracker***
- A progress tracker showing completed vs remaining tasks***
- Subject colour-coding and customisable labels***
- A motivational streak or habit tracker***
- Dark mode or accessibility options***

Award Categories

01

Innovation

Awarded to the most creative, original idea.

02

Communication & Engagement

Awarded to the clearest, most engaging submission.

03

Best Solution

Awarded to the most complete, functional build.

How to Share Your Learning

Submit all three items to your Mr. Mahmoud by Friday end of school day.

1. Your website or app

- A live link (GitHub Pages, Vercel, Netlify, Replit, etc.) or a ZIP of all source files
- Must be viewable in a standard browser with no additional setup

2. A written document (maximum 5 pages)

- Underline or highlight the most important features of your website
- Explain the key techniques used (HTML/CSS, JavaScript, frameworks, APIs, etc.)
- Include a clear AI Disclosure section listing every area where an AI assistant was used
- Use screenshots with captions where helpful — these count toward your 5 pages
- Font size minimum 11pt, standard margins

3. A 1-minute video demo (optional but encouraged)

- Show the app working — click through the key features
- Narrate what you built and why you made those design choices
- Upload to Google Drive, YouTube (unlisted), or any shareable link and include it in your document
- Strongly considered for the Communication & Engagement award

Submit your project to
